                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
                                                                                                                                                                                         CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the
                                                                                                                                                                                                                                                                                                                                                                                                         Iocal mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.ht

Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1. .65838

Fri

A human G protein and nucleic acid molecule encoding it, for diagnosing and treating cellular proliferative, bone, immune, cardiovascular, liver, pain or metabolic disorders and identifying modulators. Claim 1; Fig 1; 118pp; English. 2002-315535/35 P-PSDB; AAE21568

The invention relates to a human G-protein, termed 47124 and nucleic acid encoding it. 4734 is useful for treating cancer or aberrant cellular proliferation and/or differentiation such as breast, ovarian, prostate, colon and lung cancer, pain, heart disorders and viral disease. 47324 associate a lipid bilayer due to post-translational modifications, modulate signal transduction, control cell morphology and differentiation, mediate cellular trafficking and active cytoskeleton cramalisation. Cardiovascular disorders include hypertension and lateration. Cardiovascular disorders include hypertension and attention attention active cytoskeleton attention catherosclerosis; liver disorders include doseity and anorexia; brain storage disease; metabolic disorders include obseity and anorexia; brain clude acute meningitis and multiple solerosis; degenerative diseases include Alzheimer's disease and Parkinson's disease; blood vessel include responses of vascular cell walls to injury; has a disorders include autolumnune disease such as diabetes mellitus and rheumatodid arthritis; bone disorders include osteoporosis; mellitus and rheumatodid arthritis; bone disorders include acceptance. hormonal disorders include reproductive or fertility disorders. Ras family-associated or related disorders also include immune disorders such as autoimmune disorders or immune deficiency disorders e.g. severe combined immunodeficiency, 47324 is also useful as pharmacogenomic markers, 47324 is useful for producing non-human transgenic animals which are useful for studying the function and/or activity of 47324 and for identifying and/or evaluating modulators of 47324 activity, 47324 gene is useful in gene therapy. The present sequence is human 47324 cDNA

The present invention relates to novel human secreted proteins (SECP) and polymucleotides encoding such proteins. SECP sequences are useful for diagnosing, traeting and preventing cell proliferative disorders including cancer (e.g. arteriosclerosis, cirrhosis, hepatitis, psoriasis and atherosclerosis), developmental disorders (e.g. seizure disorders, cenal tubular acidosis, anaemia, cataract and sensorineural hearing issease, harting and preventing series (e.g. epilepsy, ischaemic cerebrovascular disease, pick's disease, Huntington's disease, caroke, dementia, Parkinson's disease, amyotrophic lateral sclerosis, schizophrenic disorders, mental disorders including mood and anxiety, Tourette's disorder and muscular disorders including mood and anxiety, disorders (e.g. acquired immunodeficiency syndrome (AIDS), allersy, disteres syndrome (ARDS), asthma, autoimmune thyroiditis, dispetes mellitus, Crohn's disease, glomerulonephritis, rheumatord athoritis, atopic dermatitis, ulcerative colitis, trauma and viral, bacterial, fungal, parasitic, protozoal and helminthic infections) and carbivovascular disorders (e.g. congestive heart failure, isachaemic heart disease, angina pectoris, myocardial infarction, hypertensive heart disease, congenital heart disease and myocarditis). They are useful for creating knocking humanised animals or transgenic animals or creating knocking humanised minals or transgenic animals or creating knocking humanised minals or transgenic animals or creations.
                                                                                                                                                                                                                                              Novel human secreted proteins and genes encoding the proteins, useful for treating, diagnosing and preventing cell proliferative, autoimmune/inflammatory, cardiovascular, developmental or neurological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    136
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              196

Human cDNA #467 differentially expressed in activated vascular tissue.

Human, gene, 88; vascular tissue, cytostatic, atherosclerosis, cardiant, hypotensive, antidiabetic, gynaecological; vasotropic, cerebroprotective, gene therapy, vascular disease, cancer; coronary; artery disease, hypertension; diabetes; pre-eclampsia; restenosis; ischaemia-reperfusion injury; stroke.

Combination for diagnosing, staging, treating, or monitoring the progression of treatment of a vascular disease, e.g. atherosclerosis, comprises several cDNAs that are differentially expressed in activated

This invention relates to a combination comprising several cDNAs that are discloses a high throughput method for detecting differentially expressed companies. The cDNAs of the invention day have companies a high throughput method for detecting differentially expressed contains a sample. The cDNAs of the invention may have antidiabetic; cytostatic; cardiant; hypotensive; antidiabetic; cytostatic; cardiant; hypotensive; antidiabetic; cytostatic; cardiant; hypotensive; antidiabetic; cytostatic to screening several molecules and may be used in gene therapy. The cDNAs of the invention may be used in a high-throughput methods for detecting differential expression of one or more companies, and an antidiable contains a sample, or screening several molecules or compounds to identify a ligand that specifically binds a contain an antidiable contains and also be used for large-scale contains, restension, diabetes, the cDNAs can also be used for large-scale contains, restensions and supported contains and chronic or acute disease contains and chronic or acute disease contains and chronic or acute disease.

                                                                                                                                                                                                                                                                                                                                                                                             8
                                                                                                                                                                                                                                                                                                                                                                                                                                                            ठ
                                                                                                                                                                              ö
associated with abnormalities in the expression, amount or distribution of the protein. The present sequence represents a cDNA of the invention that is differentially expressed in activated vascular tissue. Note: The sequence data for this patent did not form part of the specification, but was obtained in electronic format directly from USPTO at http.seqdata.uspto.gov/sequence.html?DocID=20020137081
                                                                                                                                                                                                                                                                             136

                                                                                                                                                     ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel (NOVX) human polypeptide. A polypeptide of the invention has cardiant, antiarteriosclerotic, hypotensive, immunosuppressive, dermatological, anorectic, cytostatic, antidiabetic, hemostetic, anti-HIV, antiasthmatic, antibacterial, virucide, neuroprotective, noctropic, antiparkinsonian, and antilipaemic activity. A polymucleotide encoding a polypeptide of the invention may have a use in gene therapy, and as a vaccine. A polypeptide of the invention is useful in the manufacture of a medicament for treating a syndrome associated with a human disease, the disease selected from a pathology associated with the polypeptide. These may also be used in diagnosing, treating or preventing NOVX-associated disorders such as cardiomyopathy, attentosclerosis, hypertension, scleroderma, obesity, cancer, diabetes, hemosphila, graft-versus-host disease, AIDS, asthma, Crohm's disease, hemosphila, graft-versus-host disease, AIDS, asthma, Crohm's disease, contrackegenerative disorders (e.g. Alzheimer's disease or Parkinson's disease), hematopoietic disorders, dyslipidaemias and other wasting disorders associated with chronic diseases. The nucleic acids are also useful as vaccines. The present sequence encodes a NOVX polypeptide of useful as vaccines. The present sequence encodes a NOVX polypeptide of

This invention relates to a novel isolated NOVX polypeptide comprising a fully defined sequence of, a mature form, one or more conservative substitutions or at least 95% identity to 247 amino acids as given in the specification. The invention may be useful for the development of compounds with a cytostatic, antidabetic, anorectic, cerebroprotective, neuroprotective, antidilammatory, thyromimetic or cardiant activity. In addition, the disclosed sequences may prove useful for gene-therapy or antisense-therapy. The invention may be useful for gene-therapy or antisense-therapy. The invention may be useful for the diagnosis and transment of disorders associated with aberrant expression or activity of the NOVX polypeptide, such as cancer, diabetes, obesity, and endocrine, CNS, cardiovascular and inflammatory disorders. They can also be used in various detection and screening assays, chromosome mapping, tissue typing and predictive medicine. The present sequence is that of a gene which encodes a human NOVX protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               129
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120

The invention relates to a novel (NOVX) human polypeptide. A polypeptide of the invention has cardiant, antiarteriosclerotic, hypotensive, immunosuppressive, dermatological, anorectic, cytostatic, antidiabetic, had manuosuppressive, dermatological, anorectic, cytostatic, antidiabetic, chaemostatic, antiathmatic, antibacterial, virucide, neuroprotective, nootropic, antipatkinsonian, and antilipaemic activity.

A polynucleotide encoding a polypeptide of the invention may have a use in gene threapy, and as a vaccine. A polypeptide of the invention is useful in the manufacture of a medicament for treating a syndrome associated with the polypeptide. These may also be used in diagnosing, treating or preventing NOVX-associated disorders such as cardiomyopathy, atherosclerosis, hypertension, scleroderma, obesity, cancer, diabetes, haemophilia, graft-versus-host disease, AIDS, asthma, Crohn's disease, neurodegenerative disorders (e.g. Altheimer's disease or Parkinson's disease), haematopoietic disorders, dyslipidaemias and other wasting cused as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenemics. The polypeptides are also used as hybridisation probes, in chromosome mapping, tissue typing, the interventive medicine, and pharmacogenemics. The polypeptides are also used as hybridisation probes, the present sequence encodes a NOVX polypeptide of ö 309 420 New NOVX polypeptides and nucleic acids, useful for preventing or treating NOVX-associated disorders, e.g. cancer, diabetes, asthma or AIDS, and in chromosome mapping, tissue typing 180 249 369 429 129 120 189 9 1 AGTGGCAAGATCGCGTCCCTGGATCGGGTGAAGGTACTGGTGTTGGGAAGTCTCAGGTGTT 121 ACTGTGGGCTGCTCACTGGATGTCAGAGTTCATGATTACAAAGAAGGAACCCCAGAAGAG 301 ACAAATAAGAAGTCCTCCCAAAACTTGCGTCGTTGGTCATTGGAAGCTCTCAACAGGAT 70 GGGAAATCTTCGTTAGTCCATCTCCTATGCCAAAATCAAGTGCTGGGAAATCCATGG 61 GGGAAATCTTCGTTAGTCCATCTCCTATGCCAAAATCAAGTGCTGGGAAATCCATCATGG 130 ACTGTGGGCTGCTCAGTGGATGTCAGAGTTCATGATTACAAAGAAGGAACCCCAGAAAGAG 190 AAGACCTACTACATAGAATTATGGGATGTTGGAGGCTCTGTGGGGCAGTGCCAGCAGGGGTG 181 AAGACCTACTACATAGAATTATGGGATGTTGGGGGGCTCTGTGGGCGCAGTGCCAGCGGGG 250 AAAAGCACAAGAGCAGTATTCTACAACTCCGTAAATGGTATTATTTTCGTACACGACTTA ACAAATAAGAAGTCCTCCCAAAACTTGCGTCGTTGGTCATTGGAAGCTCTCAACAGGGAT 370 TTGGTGCCAACTGGAGTCTTGGTGACAAATGGGGGATTATGATCAAGAACAGTTTGCTGAT 10 AGTGGCAAGATGGCGTCCCTGGATCGGGTGAAGGTACTGGTGTTGGGAAGACTCAGGTGTT ö Score 731.6; DB 10; Length 739; Pred. New isolated NOVX polypeptides and nucleic acid molecules useful for treating, preventing and diagnosing pathological conditions with NOVX-associated disorders, such as cancer, obesity, diabetes and inflammatory or CNS diseases.

Claim 20; SEQ ID NO 127; 250pp; English.

This invention relates to a novel isolated NOVX polypeptide comprising a fully defined sequence of, a mature form, one or more conservative substitutions or at least 95% identity to 247 amino acids as given in the specification. The invention may be useful for the development of compounds with a cytostatic, antidiabetic, anorectic, cerebroprotective, neutinflammatory, thyromimetic or cardiant activity. In addition, the disclosed sequences may prove useful for gene-therapy or antisense-therapy. The invention may be useful for the diagnosis and treatment of disorders associated with aberrant expression or activity of the NOVX polypeptide, such as cancer, diabetes, obesity, and endocrine, CNS, cardiovascular and inflammatory disorders. They can also be used in various detection and screening assays, chromosome mapping, tissue typing and predictive medicine. The present sequence is that of a gene which encodes a human NOVX protein of the invention.

The invention relates to an isolated polypeptide. The polypeptide is useful for diagnosing a pathological condition or a susceptibility to a pathological condition in a subject, by determining the presence or amount of expression of the polypeptide in a biological sample and diagnosing a pathological condition or a susceptibility to a pathological condition based on the presence or amount of expression of the condition based on the presence or amount of expression of the condition based on the presence or amount of expression of the condition based on the presence or amount of expression of the condition based on the presence or amount of expression of the condition. The polypeptide is useful for involves contacting the polypeptide is useful for preventing, treating, or acid encoding the polypeptide. The polypeptide or the nucleic acid to a mammalian subject. The nucleic acid subject, which involves determining the polypeptide or the nucleic acid to a mammalian subject. The nucleic acid or apathological condition or susceptibility to a pathological condition or conceptibility to a pathological condition or susceptibility to a pathological condition or conclusion and an antibody to the polypeptide are useful for the nucleic acid and an antibody to the polypeptide are useful for the nucleic acid and the antibody are useful as immunosuppressive agents.

Conclusion acid and the antibody are useful as immunosuppressive agents or affinity antibodies and increase serum immunosuppressive or induced to pathological condition or susceptibility and a novel bunnant proper
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated polypeptide useful for diagnosing and treating immunosuppressive conditions such as autoimmune disease and Parkinson's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 959 BP; 260 A; 200 C; 249 G; 247 T; 0 U; 3 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence data for this patent did not form par specification but was obtained in electronic forms segdata.uspto.gov/sequence.html?DocID=20020168711.

The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences are assessing biodiversities, or in identifying mutations in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antibodies specific for it. The present sequence is useful for generating antibodies specific for it. The present sequence is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              276
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    379
                                                                                                                                                                                                                                                                                                                                                        New polynucleotide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  139
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            156

human secreted proteins, and encode the proteins given in AAY12261 to
AAY12514, respectively. The proteins given represent the signal peptide
and an N-terminal fragment of a secreted protein. The nucleic acid
sequences can be used for producing secreted human gene products. They
can also be used to develop products for diagnosis and therapy. The
proliferation/differentiation activity, heamtopoiesis regulating
activity, tissue growth regulating activity, haematopoiesis regulating
activity, tumour inhibition activity or other activity, haemacery
ctivity, tumour inhibition activity or other activities. The products
can be used in forensic, gene therapy and chromosome mapping procedures.
The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide into a cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New nucleic acids encoding human secreted proteins - obtained from cDNA libraries prepared from e.g. liver, ovary, brain, prostate, kidney, lung, umbilical cord, placenta and colon tissue.

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the MRNA because they are often obtained from oligo-dry primed CDNA libraries. Such ESTs are not well suited for isolating cDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design

ccattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 5912 nucleotide sequences, appearing as ABX50072-ABX55983, or complements of them. Also included are it. I a transformed cell having a nucleic acid comprising an LMFD nucleic acid linked to a promoter and a 3' non- translated sequence that conditions in the cell to cause termination of transcription and addition of polyadenylated ribonuclectides to a 3' end of the mRNA molecule; and of polyadenylated ribonuclectides to a 3' end of the mRNA molecule; and complement comprising a level or pattern of a molecule in a bovine cell or tissue comprising; all incubating a marker nucleic acid (comprising any of the 5912 nucleic acid molecule obtained from the bovine cell or complementary nucleic acid molecule obtained from the bovine cell or crissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid permits the detection of the molecule, and (b) detecting the level or pattern of the complementary nucleic acid is practicity of the detection of the complementary nucleic acid is practicity of the detection of the complementary nucleic acid is practicity of the detection of the complementary nucleic acid is practicity of the detection of the complementary nucleic acid is practicity of the detection of the complementary nucleic acid is practicity of the detection of the complementary nucleic acid is practicity of the detection of the complementary nucleic acid is practicity of the detection of the complementary nucleic acid is practicity of the detection of the molecule. The present sequence is one of the 5912 bovine LMMP EST expressed sequence tag) nucleic acids. Note: The present the molecule of the specification but was obtained in the present sequence was not shown in the specification but was obtained in the present sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              998 AGTAAATGAGCAATGACAGTGTACTGCAGAGAAAATTTACTCTTGCCTAGAACTGGAGGG 1057

                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CTTCGTTAGTCCATCTCCTATGCCAAAATCAAGTGCTGGGAAATCCATCATGGACTGTGG 136

The present invention describes oligonucleotide libraries for detecting messenger RNAs that populate a (sub-)transcribtome, where the (sub-)transcriptome comprises messenger RNAs transcribed from multiple transcription units that populate a genome. The library comprises several oligonucleotides, each capable of hybridising selectively to a set of messenger RNAs transcribed from a given transcription unit of the genome, which encodes one or more messenger RNA splice variants. The oligonucleotide libraries are useful for detecting manAs from a biological sample, in expression profiling studies, in qualitatively or quantitatively characterising the corresponding transcriptome, and in detecting RNA transcripts and splice variants of human or animal charactiptomes. The libraries may also be used as specialised minical libraries to detect transcripts of a sub-transcriptome under a particular clibraries to detect transcripts of a sub-transcriptome under a particular biological or pathological state, and so allowing the detection of tissue and pathology-specific genes such as those genes only expressed in compensation to a specific pathological condition; to detect condition; to detect condition; to detect condition to detect condition to detect developmental specific genes; and to detect RNA transcripts and splice variants of a transcriptome of a patient suffering from a particular clausing and mice, which are used in the exemplification of the present invention. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format parts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              selectively hybridize to mRNAs transcribed from a transcription unit of a genome, useful for detecting tissue-, pathology-, and developmental-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
